

# Considering upgrading your ERP to the Cloud?

Microsoft Dynamics 365 Business Central is an online enterprise resource planning application which uses Microsoft Azure Active Directory as a first layer of security to your ERP.

## **Simplified Version Management**

Reduce infrastructure and management of outdated legacy solutions with a secure SaaS ERP solution.

Business Central releases new versions twice a year, either automatically or scheduled, so users can have access to the latest features.

## **Comprehensive Capabilities**

Capabilities include financial management, sales management, manufacturing, supply chain management and project management.

Integrate seamlessly with Microsoft 365 and enhance your solution with Power Automate, Power BI and Microsoft App Source.

## **Proven Solution**

Business Central is the cloud version of former Microsoft Dynamics NAV, which has been utilized for over 30 years.

Leverage the same great core features with the benefits of a cloud solution, including easier integrations with third-party applications.

## **Mobile and Secure**

Enable employees to remain productive while working remotely on a secure platform.

Manage user access with Azure Active Directory and system access with permissions. Navigate seamlessly between Dynamics 365 and Microsoft 365 apps.

## Rackspace Technology Application Services

At Rackspace Technology, we support our customers with their journey to improve business processes through service offerings.
